Dental CAD/CAM System

DreamEDGE

DECSY

Easy to use full self-designing

DECSY enables dental technicians to create a high-quality all ceramics crown easily.

All ceramics crown is harmless to a human body, and has no concern that gums will turn black because of use of ceramo-metal crown which is created by combining ceramics onto metal.

DECSY supports the dentists who consider providing patients with better treatment. Use of CAD/CAM technology completes high-quality dental prostheses efficiently.

Ceramics created with DECSY provide ensured quality by management of sintering operation in a factory.

DECSY not only provides high-quality all ceramics crowns but also supports the traditional technological operation robustly, including WAX-UP.

DECSY SCAN

Easy to use full self-designing

Easy-to-use full self-designing and automatic machining system.

Auto-designing of a crown and bridge fitting for an abutment tooth and margin measured with laser beam from an impression model.

A high-speed and high-accuracy automatic creation of crown restoration through the use of computer controlled machining device.

Wide-ranging compliance.

During long-time machining, the system allows you to perform measurement and shape modification, thus it provides high manufacturability.
